

Transporting Agricultural Supplies Classified as Hazardous

Farmers routinely transport agricultural supplies that are classified as hazardous materials: gasoline, diesel fuel, anhydrous ammonia, pesticides, fertilizers and others. You, your family members and employees that transport hazardous materials must be cautious to prevent accidents and unauthorized access to the supplies. Any suspicious incident should be reported to local law enforcement personnel.

If you transport hazardous materials in excess of the thresholds listed in Table 2, the load must have a placard and you are required to develop a Transportation Security Plan – unless you qualify for an agricultural exemption.

Agricultural exemptions from transportation security plans include:

- Farmers who generate less than \$500,000 annually in gross receipts from the sale of agricultural commodities and products; transport hazardous materials in direct support of their farming operations; and transport hazardous materials by highway or rail within 150-mile radius of their farming operation.
- Farmers who only transport hazardous materials from the farmstead to the field, from field to field, or from field to the farmstead.

If you do not ship or transport hazardous materials in amounts that require placards, you do not need a transportation security plan. Also, if suppliers deliver hazardous materials to your operation, it is their responsibility to have a plan.

Even if you are exempt from having a transportation security

Table 2. Hazardous materials and quantities that require placards and a transportation security plan (unless exempt).

Indicate (✓) materials transported	Material	Quantity	Placard required
	Gasoline	More than 119 gallons in a single container	
	Anhydrous ammonia	OR,	
	Pesticides	More than 1,000 pounds in multiple containers	
	Ammonium nitrate fertilizer		
	Propane/LP gas		
	Diesel fuel	More than 119 gallons in a single container	
	Dynamite	Any amount	
	Detonators	More than 1,000 pounds	

*Placards are diamond-shaped signs that are used to identify shipments of hazardous materials. When required, placards must be placed on both ends and both sides of trucks that carry hazardous materials. They are coded by color and contain symbols and numbers that designate the hazard class or division of the hazardous material that is being shipped. Placards are available from your suppliers.

plan, you are required to display appropriate placards if you transport hazardous materials in excess of the threshold quantities. Michigan authorities enforce hazardous material transportation requirements.

Transportation Security Plan

If the security plan requirement applies to your operation, the plan must include measures to address (1) personnel security, (2) unauthorized access and (3) security during transportation.

1) Personnel security: To the extent feasible and practical, references, employment history and immigration status will be checked for persons hired after September 25, 2003, who will be responsible for transporting these listed hazardous materials from any supplier to this operation.

Persons responsible for transporting the listed hazardous materials from any supplier to this agricultural operation will be instructed on how to adhere to this security plan.

2) Unauthorized access: If it is necessary to stop during transportation of the listed hazardous materials, authorized personnel of this agricultural operation (operation personnel) will, to the extent practical, prevent unauthorized persons from gaining access to the shipment by monitoring the shipment during the stop, locking the shipment inside the transport vehicle, securing the shipment to the transport vehicle, and/or securing closures on the container(s) or package(s).

If it is necessary to stop during transportation of the listed hazardous materials, operation personnel will check the vehicle and the shipment after the stop to evaluate whether tampering or illegal activity has taken place.

Operation personnel will report suspicious incidents or events to local law enforcement officials and/or the FBI as soon as is practical, using the contact information supplied in this emergency farm plan.

3) Security in transit: Operation personnel will, to the extent practical, minimize transit time for the listed hazardous materials by going directly from the supplier to the operation.

Operation personnel will report suspicious incidents or events to local law enforcement officials or the FBI as soon as is practical, using the contact information supplied in this emergency farm plan.

Remember:

- For your records and personnel use, keep a copy of this plan in an accessible but secure location at the agricultural operation.
- Your plan will not be collected by or kept on file at state or federal DOT offices.
- Your plan will be enforced by State or Federal DOT as part of the general enforcement program for the HAZMAT carrier and shipper community but not as part of any roadside stop inspections.
